

CARBONACTIVE™ ACTIVATED CARBON

Removes unwanted organic and synthetic substances from aquarium water

Over 20 years experience in marine ornamental aquaculture and water processing has enabled New Era Aquaculture to supply specialist products for aquarium use as part of our technical filtration range.

Carbonactive™ is made from bituminous coal processed to the highest degree. Extruded into pellets of a specific diameter and length, Carbonactive™ provides the optimum surface area for maximum water:media exposure, increasing efficiency and time of molecular uptake.

Used strategically, the fast absorption properties of Carbonactive™ mean minimum exposure to livestock whilst ensuring optimum water quality.

Available in 250g pots and 1kg pails

Benefits

- Low phosphate release
- Low dust
- High organic retention
- Increased absorption
