

## HERBIVORE FLAKES

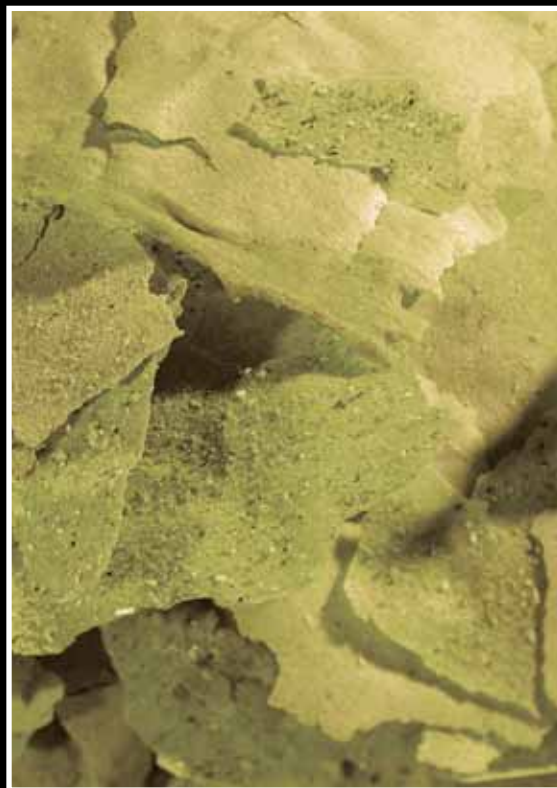

A complete balanced diet for herbivorous coral reef fish

Over 20 years experience in marine ornamental aquaculture and water processing has enabled New Era Aquaculture to develop a range of technical feeding products.

As part of our objective to incorporate the latest scientific advancements within our technical feed ranges, we have created a tailor made feed for herbivorous marine fish.

Our Herbivore Flakes combine our expert knowledge of natural ingredients and preservatives together with a blend of carefully selected algae for captive herbivorous species; we have placed particular emphasis on the requirements of bottom dwelling species and delicate feeders to provide a highly palatable and digestible balanced diet.

Herbivore Flakes are made from whole dietary components that provide optimum mineral profiles and a rich source of high quality protein and natural carotenoid pigments.

Available in 30g pots & 200g pails

### Benefits

- Helps restore vivid colouration, vitality lost through lack of appropriate algae
- A simple and effective feeding programme that satisfies the nutritional requirements of captive herbivorous feeders and specifically designed for delicate feeders
- Designed to minimise leaching effects and complement installed filtration systems
