

## TROPICAL FLAKES

A complete balanced diet and advanced mineral formula for tropical freshwater fishes

New Era Aquaculture Ltd has incorporated over 20 years of ornamental aquaculture experience and research and development to produce this highly palatable and digestible tropical flake diet.

Blended with only natural ingredients and preservatives it provides a unique mineral profile exclusively formulated by New Era for tropical freshwater fishes.

Tropical Flakes are a rich source of high quality protein, lipids and natural carotenoid pigments which have been designed to minimise biodegradation and thereby assist aquatic recirculation systems.

This tropical diet has been proven to be an attractive feed for delicate feeders, including discus and cichlids.

Available in 50g pots & 250g pails

### Benefits

- Water quality improved by low leaching formula, which 'locks in' nutrients until consumed
- Healthy weight and vibrancy by using only high quality proteins and natural ingredients
- Highly palatable - a diet designed for Tropical Community Fish and Discus
- Enhanced colouration through an exclusive tropical mineral profile
